The actual Open Box product may differ in packaging and included accessories, but has been tested to ensure basic functionality. Most customers receive within 39 days. Variable stripe size for performance tuning by application. 64bit LBA support. ATA passthrough mode support. 32 pooled DMA channels. Complete configuration management suite. Multiple logical unit sizes and RAID levels on one card. Multiple card support within a system for large storage requirements. Hotswap and hotspare support for data availability. Dynamic sector repair for robust data protection. S.M.A.R.T. disk drive monitoring for reliability. Emergency Flash Recovery protects against failed firmware upgrade. Drive activity LED support. Online Capacity Expansion and RAID Level Migration. Enhanced data protection with write journaling for nonredundant arrays and accidental drive removal. Drive insertion and removal notification. I Recommend this to everyone! Justice is not done to the quality of this cards design without investing in a highend case with a SATA backplane, and a known stable motherboard. Think in terms of root, home, swap when choosing the size of this partition. Its not trivial. It takes 24 hours to charge the BBU. But it carries that charge for 255 hours, more than adequate time to respond to a power failure. That once you set it up, it really just works. Its also quite fast and very reliable. Never needs attention. Ive added the battery backup and am running a RAID 5 data array of 5x500 GB Seagates, for 1.8 TB formatted. Feel my data is as safe as I can reasonably make it inside the case. But in this case, you do get what you pay for. Config XP SP3, Intel 975XBX2 MoBo, Intel Q6600 quad overclocked 25% to 3 GHz, 4 Gig Acer PC800 RAM, etc. The web and BIOS interface are both easy to use. I was up and running in just a couple of minutes.

If you have enough drives you can migrate between RAID levels without data loss. The drivers provided by 3ware are very well written and available for many platforms. Works nice with Centos 5.

Both browserbased and CLI mgmt software. Need to download driver from 3ware for Centos5 though. Great order processing and 3day shipping from newegg. However on this order, I rate it 2 since Newegg misled buyers. It is not a retail box. Youve got to buy the breakout cables from elsewhere. New eggs senior agent may promise you the refund for this extra cost. However, you may never see the money back as what happened to me. Not a retail box which is fullcolored box and containing accessories like the sata breakout cables. It wont be easier than nowadays rebate process to get Newegg refunding you the cable cost. Dont turn off caching and queueing in the controller settings. Otherwise, it will be way two slow. Click here for more details. Christopher Stiefel 4.0 out of 5 stars This will also work with the BBU attached if you need to mount it in a short slot. The card does get quite warm though so keep cooling in mind. I think the kit should. Still, this is a great product at a pretty good price. Details I bought two 3ware 9659SE8LPML cards for a matching set of large RAID6 servers. The one problem with these cards is they dont come with the BBU Battery Backup Unit by default Part BBUMODULE03 which is highly stressed for enabling write caching A good UPS could be the other possibility but. One of my cards failed shortly after initial setup. It happens, especially with some companies shipping habits. Not a bid deal but something that had to be handled. So I had to replace it. Then due to my common luck; the original place of purchase was out so I had to RMA for refund only and hunt for another one. Amazon to the rescue.

<http://idc504.com/images/canon-mini-dv-camcorder-manual.pdf>

Granted it cost a tad more than the OEM, however, this is the full KIT, not just the OEM board which I had before. So I should have done this the first time. This does use PCIExpress x4 due to the 8 channel setup x8 and x16 is fine also. If you have only PCIExpress x1 capability left, you might need to look at other options. It only supports SATA 3G or SAS. If youre building a SPEED critical system, you might want to get the newer SATA 6G version even for SATA 3G drives. It will improve your speeds believe it or not. However for me this was just a longterm file server with a mirror so speed

wasnt as critical and this saves quite a few bills. Even so, this is a very fast performer. Just not the king of the heap. All in all a known good 8port RAID card and this one includes the SFF8087 miniSAS to SATA breakout cables. Nice package. If they added the BBU, it would be perfect. Using this system with eight Samsung HD154UI 1.5TB drives in a RAID 6 configuration with no Hot Spares 9TB total drive 6 data 2 error; really more like 8.3TB usable but. we know how that really goes.. Im running two systems that mirror each other so Id have to lose 6 drives 3 from each system at the same time to lose all data. Anything can happen but for a total systems budget of four grand, this is a pretty secure way to get a ton of very secure storage using very inexpensive equipment. I choose this RAID card instead of the others available due to my history with 3ware and many other cards. 3ware makes a good raid card, honestly in my opinion, the best bang for the buck. I hope LSI improves to the 3ware level now that they own 3ware. Lets all wish them the best and hope they do. This comes in an LSI branded box but still is the same 3ware product. Was shipped overnight and got here right when advertised. Card works great.

Was concerned that the newer firmware and drivers might cause some problems with existing data, and potentially need to rebuild or worse, but that wasnt the case, of course your mileage may vary. Make sure you update the drivers as instructed as there are some bug fixes for the new firmware. Very happy with the purchase. One needs to spend time to read manuals and be clear on procedures for unit maintenance such as HDD replacement and keep up with software updates. But is this is your first raid card. You may run back and forth to complete your configuration. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading.
