There are strict classification systems enforced by competitive motorcycle sport sanctioning bodies, or legal definitions of a motorcycle established by certain legal jurisdictions for motorcycle registration, emissions, road traffic safety rules or motorcyclist licensing. There are also informal classifications or nicknames used by manufacturers, riders, and the motorcycling media. They have smooth tires with a light tread pattern and engines generally in the 125 cc 7.6 cu in and over range. Choppers are usually custom projects that result in a bike modified to suit the owners ideals, and, as such, are a source of pride and accomplishment. Stereotypically, a chopper may have raked out forks, small fuel tanks and high handlebars. Choppers were popularised in the Peter Fonda film Easy Rider. Being designed primarily for visual effect, choppers will not usually be the most efficient riding machines. Sport bikes have comparatively high performance engines resting inside a lightweight frame. The distinction between touring and sport touring is not always clear as some manufacturers will list the same bike in either category in different markets. The Honda ST1300 PanEuropean, for example, was listed by Honda as a sport touring motorcycle in the United States and Australia, but as a touring motorcycle in Europe. Most adventure motorcycles function well on graded dirt and gravel roads but are less than ideal on more difficult offpavement terrain. This increasingly popular type of motorcycle is often a dualsport that has been fitted by the manufacturer with smaller rims and road tires.

Supermotos are quickly gaining popularity as street bikes due to their combination of light weight, durability, relatively low cost, and sporty handling. Scooters usually have the engine as part of the swingarm, so that their engines travel up and down with the suspension. They are differentiated from scooters by their larger wheels and their use of footpegs instead of a floorboard. They often have a gear shifter with an automatic clutch. Mopeds were very popular in the United States during the fuel crisis of the late 1970s and early 1980s, but their popularity has fallen off sharply since the mid 1980s. The term offroad refers to driving surfaces that are not conventionally paved. These are

rough surfaces, often created naturally, such as sand, gravel, a river, mud or snow. These types of terrain can sometimes only be travelled on with vehicles designed for offroad driving such as SUVs, ATVs, snowmobiles and mountain bikes or vehicles that have offroad equipment. The motorcycles have a small fuel tank for lightness and compactness. Long travel suspension allows riders to take jumps at high speed. Motocross engines are single cylinder two stroke or four stroke units, which vary in size from 50cc up to about 500cc. At the professional level, bikes are split up into two levels based on their displacements MX and MX Lite. The MX Lite class contains 125cc two stroke engines and 250cc four stroke engines, while the MX class pits 250cc two stroke engines against 450cc four stroke engines. Motocross bikes are also used in freestyle motocross. Enduro riders compete over a longer course which may include roads; and an enduro event may last between one day and six days such as the International Six Days Enduro. Engine capacities tend to be larger, usually between 450 cc and 750 cc.

A dualsport bike may resemble an enduro bike, but since a dualsport bike is not intended to be used for competition, it may be less rugged, and equipped with dual purpose tires and with more road legal equipment, such as indicators, mirrors and extra instruments. Most dualsport bikes require a number plate to be ridden on state and county roads. For a trials bike, low weight and crisp throttle response power are prioritized, so trials bikes tend to have a small 125 cc to 300 cc engine, with two strokes being common. The engines, fueled by methanol, are long stroke four stroke singles, such as JAP and Jawa. They have at most two gears. Some types, such as speedway, and gras track bikes, are designed to take left turns only. They are much smaller and more nimble than a snowmobile, and they have a tighter turning radius which lets the rider go where many snowmobiles cannot. The first prototype of motorcycles with a rear tread date all the way back to the 1920s, with failed attempts to bring them onto the market until recent times. Contemporary examples include the Quasar, and the Peraves range. Please help improve this section by adding citations to reliable sources. Unsourced material may be challenged and removed. Some brands have made various types of three wheelers direct from the factory. Most of these vehicles are treated as motorcycles for registration or licensing purposes. These include Hondas Gyro range, all of which have a front wheel that leans and a pair of rear wheels that do not, and the Piaggio MP3, which has two front wheels and a single rear wheel, all of which lean. The Yamaha Niken is also a tilting three wheeler but has smaller track width such that it is considered a motorcycle by some authorities. See Retrieved November 20, 2019.
